

insoft Room Environment

This intelligent room climate monitoring solution empowers businesses to improve the well-being and performance of their workforce. By collecting various sensor data that characterize the quality of the office environment (e.g. temperature, relative humidity, carbon dioxide levels, illuminance), optimal working conditions can be created and maintained. This can serve as an important measure to promote employee health and increase productivity and innovation. Automated notifications can be triggered when certain thresholds are exceeded, allowing an ideal indoor air quality to be restored as quickly as possible.

insoft Room Environment can also be utilized for effective energy management – by recording and evaluating power consumption. To do this, individual consumers must be connected to an intelligent Bluetooth Low Energy socket (insoft Locator Beacon Smart Plug). The latter measures the power consumption and wirelessly transmits it to the web-based insoft software tools. Here, the consumption data can be viewed, and energy-saving plans can be stored.

insoft Room Environment can be used standalone or as an additional feature of the insoft Workplace Experience App. The system relies on cost-effective, low-maintenance Bluetooth Low Energy hardware, is non-intrusive, and integrates seamlessly with existing control systems.

Environmental Data

Collecting sensor data helps companies create a healthy working environment for their staff. Relevant metrics are usually temperature, humidity, CO₂ levels, and possibly light intensity.

Analysis & Insights

Interpreting the gathered environmental sensor data helps with the monitoring and optimization of office spaces. That way, the health and productivity of personnel can be increased.

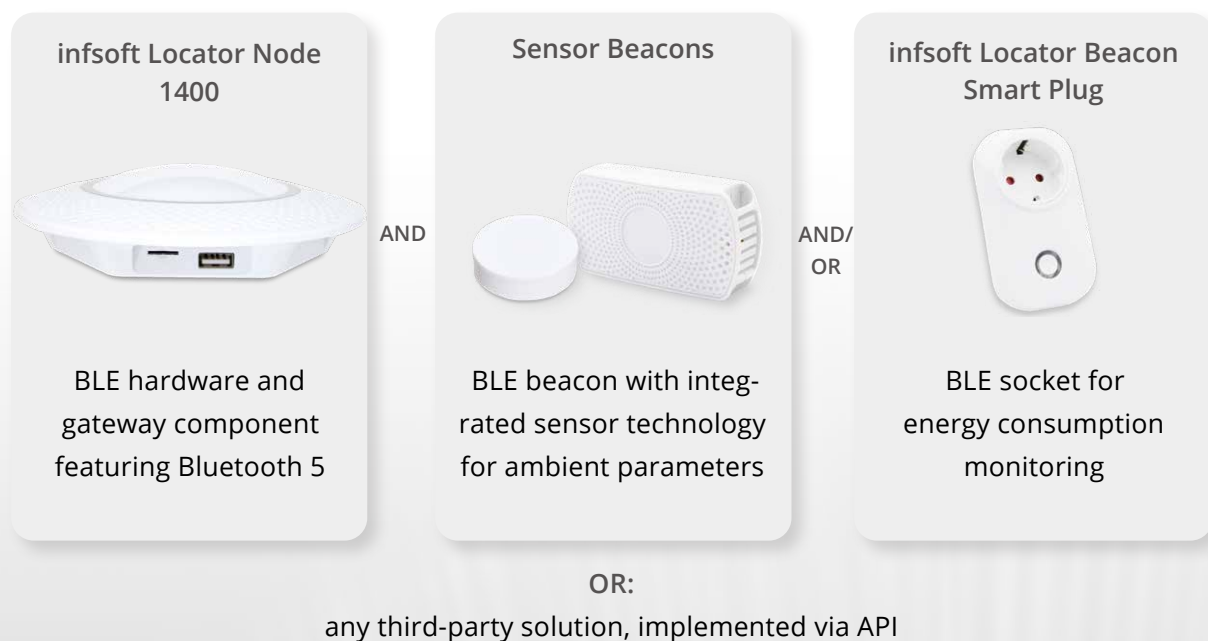

Room Climate Control

Sensor data can be integrated into a mobile app. With existing interfaces to the building control system, adjustments to the room climate, such as temperature regulation, can be made via the app.

Technical Implementation

Beacons with integrated sensors for collecting environmental data (“Sensor Beacons”) and infsoft Locator Nodes 1400 are installed on the premises. Based on the sensor functions, the beacons determine various values such as temperature and relative humidity in the area to be monitored. Via Bluetooth, the collected data is sent to a Locator Node 1400 within range. From there, the data is transmitted to the infsoft LocAware platform®, where it is intelligently processed and made available via web services.

Required Hardware

Deployed Software

insoft Room Environment I Impressions

Cost Examples

200
Sensors

€2.62 *

(software insoft
Sensors)

One-time investment:
approx. €23,200
(including hardware,
project management,
shipping, and setup)

1,000
Sensors

€0.82 *

(software insoft
Sensors)

One-time investment:
approx. €63,400
(including hardware,
project management,
shipping, and setup)

2,000
Sensors

€0.51 *

(software insoft
Sensors)

One-time investment:
approx. €114,000
(including hardware,
project management,
shipping, and setup)

* monthly costs per sensor
