

infsoft Inventory

infsoft Inventory supports companies in the efficient inventory of their assets and user-friendly asset management.

There are several options available for organizations interested in implementing infsoft Inventory more extensively. Databases already existing can be linked to the application through interfaces to current ERP software. Localization can be accomplished with active components like BLE beacons, E-ink Display Beacons, and infsoft Paper Tags. The latter allows for direct and dynamic information visualization (e.g., inventory numbers, QR codes, product details, etc.) directly on the asset in addition to localization.

Other possible functions of infsoft Inventory include triggering automatic notifications before an upcoming inspection date or highlighting borrowed items in color on the user interface.

This product is based on the infsoft Assets software tool.

Inventory

When compared to key date inventories, infsoft Paper Tags allow for ongoing asset counting and recording. In addition to inventory management, the solution provides additional features like automated notification triggers.

Positioning

The tracking solution enables accurate localization of mobile and stationary office inventory in particular rooms and areas. Every floor of the building allows for a smooth determination of the position.

Analyses

An organized dashboard gives the user insights into how the assets are being used, in addition to their location and status. Additionally, there are features for filtering and grouping the items.

Technical Implementation

When asset tracking and inventory are required, insoft Paper Tags (or BLE Beacons or E-Ink Display Beacons) are attached to the items to be tracked. In addition to Bluetooth Low Energy (BLE), these also support Near Field Communication (NFC) and can be easily and accurately recognized and assigned with a handheld reader using a QR code. The insoft Paper Tag sends Bluetooth signals to the insoft Locator Node (Dongle) installed in the building, which forwards the information to the insoft LocAware platform®. The intelligent processing of the data takes place within the platform.

Infrastructure Hardware

insoft Locator Node Dongle

Compact Wi-Fi gateway hardware for BLE components.

AND

insoft Paper Tag

Ultra-thin Tags for efficient inventory and localization of assets.

OPTIONALLY, E-Ink Display Beacons or Bluetooth Low Energy (BLE) Tags can be used as tag hardware.

Deployed Software

insoft Assets

insoft Automation
