# E-Ink Display 1.54"

The compact 1.54" infsoft E-Ink Display is based on the Bluetooth Low Energy 5.0 technology and is ideally suited for digital labeling and information display in space-constrained environments. Leveraging advanced E-Ink display technology, it enables fully graphic content with agile and efficient updates. A wide viewing angle of nearly 180° ensures excellent readability from various perspectives. Smaller display sizes are particularly versatile in office environments – for example, for digital locker labeling or as status indicators on technical equipment. Reported issues or open service tickets can be clearly visualized. Integrated QR codes allow users to directly initiate service processes or access additional information.

TECHNICAL FEATURES
